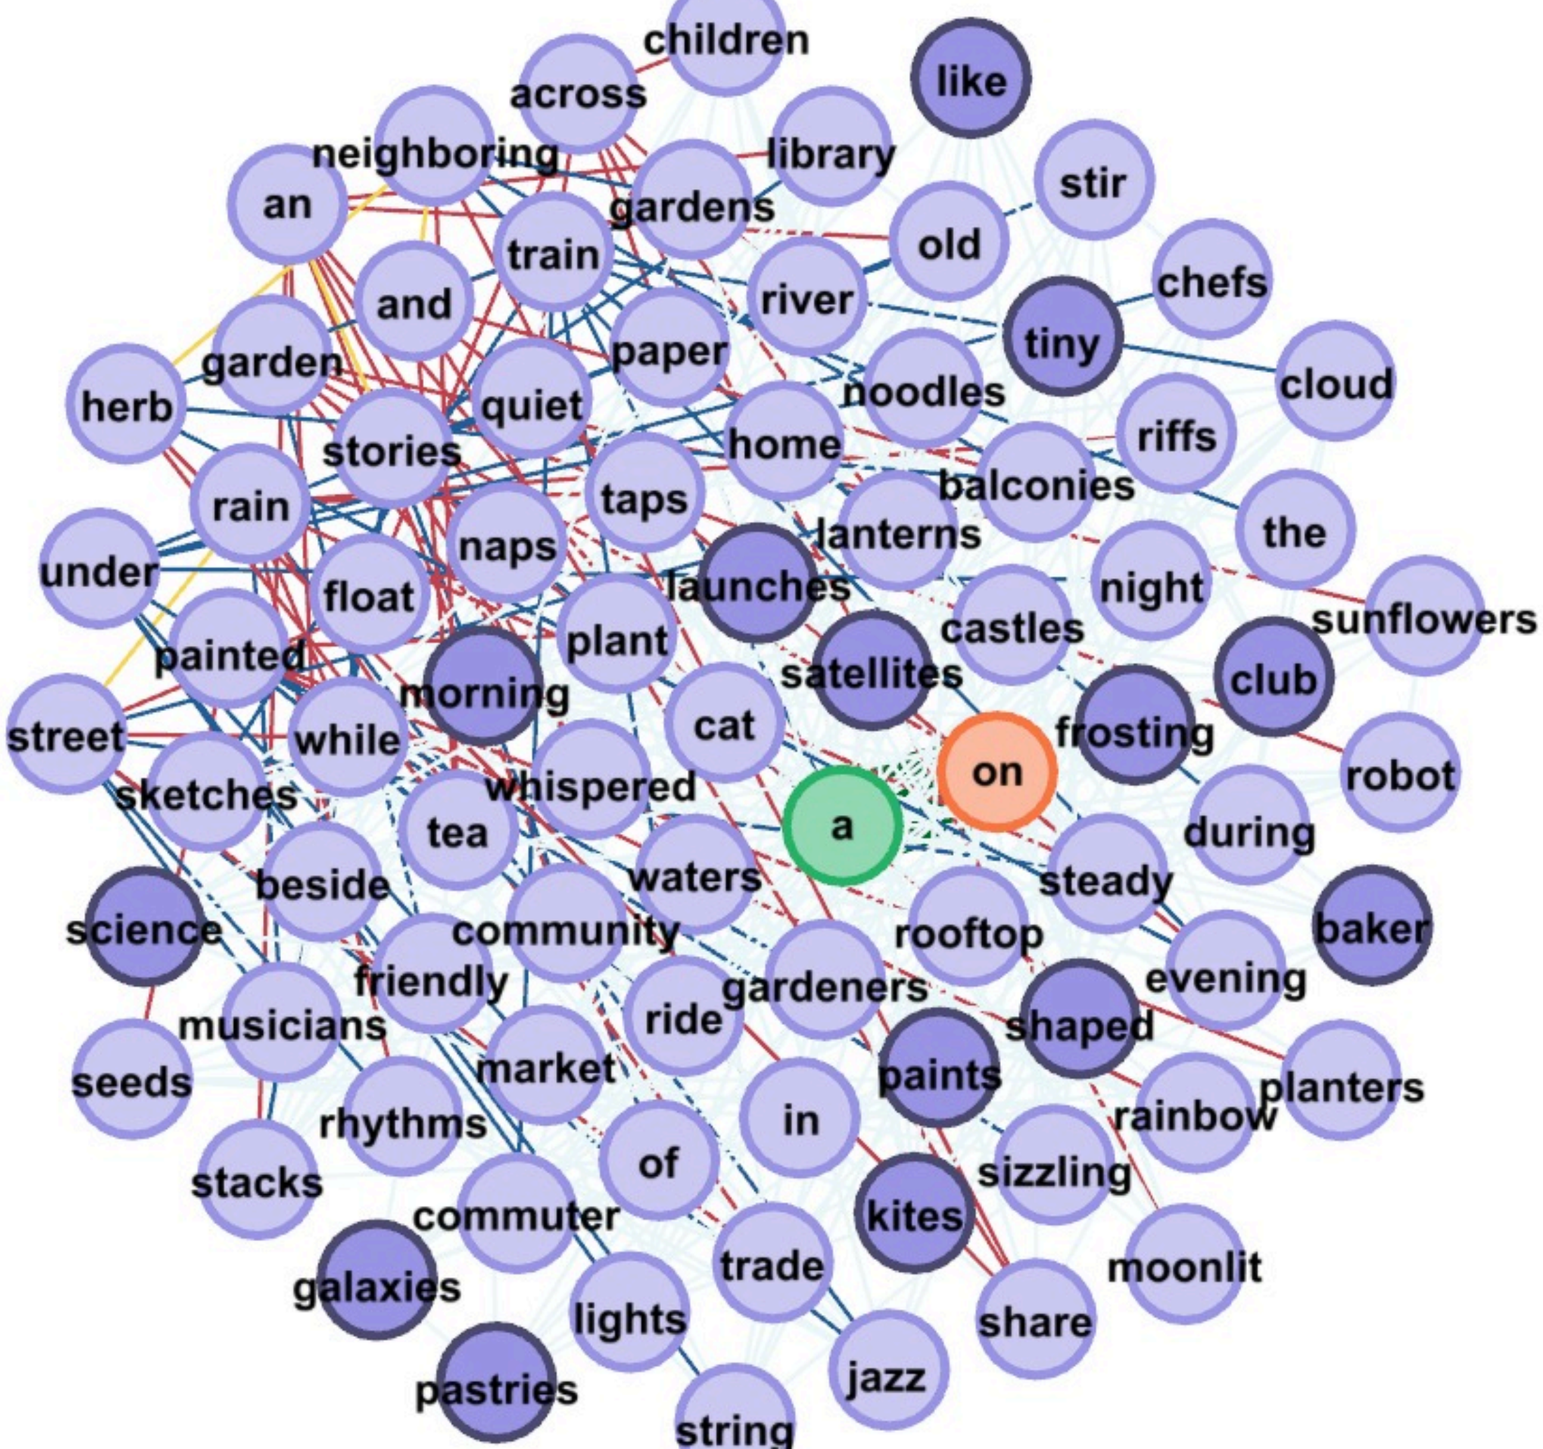
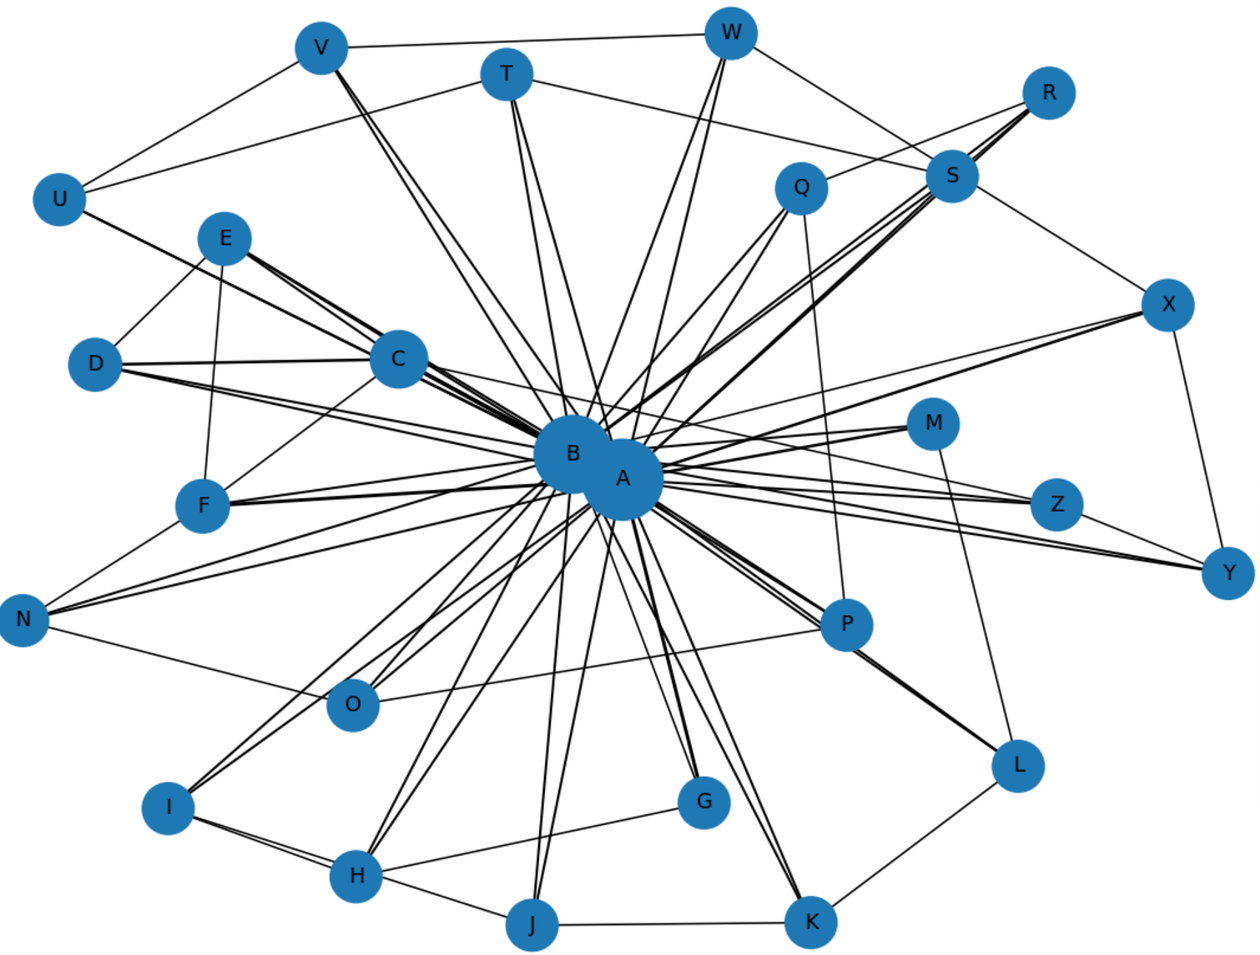
NEIGHBORHOOD STORIES NETWORK MODEL: GPT-2

```
CORPUS = [
  "A friendly robot waters sunflowers on a rooftop garden.",
  "Children float paper lanterns across a quiet moonlit river.",
  "An old library cat naps beside stacks of whispered stories.",
  "Street musicians trade jazz riffs while rain taps steady rhythms.",
  "A baker paints frosting galaxies on morning pastries.",
  "Community gardeners plant seeds in rainbow painted planters.",
  "Night market chefs stir sizzling noodles under string lights.",
  "A commuter sketches cloud castles during the train ride home.",
  "Neighboring balconies share herb gardens and evening tea.",
  "A science club launches tiny kites shaped like satellites."
]
```

- 10 community-focused vignettes (sunflowers, lanterns, night markets, etc.)
- 84 unique words, 354 co-occurrence links





Symbolic sequencial graph

This network visualizes how words (represented as letters A, B, C...) co-occur in the corpus sentences.

Each node is a symbol, and each symbol corresponds to a unique word in the original text.

Each edge shows that two words appeared next to each other at least once in the symbolic sequence.

The thicker / darker edges mean higher co-occurrence frequency
